

### Exemptions

Prescription medicines, prescribed medical devices, non-prescription medicines and essential dietary requirements in liquid, aerosol or gel form that you need for your flight are exempt from the limits. Baby food, formula and other essential baby products are also exempt from the limits. The amount of these items you carry should be reasonable for the length of your flight.

If you have any items you think are exempt, you can keep them separate from your plastic bag of liquids, aerosols and gels, in your carry-on baggage.

Exempt items will still be inspected at the security screening point. Please have any medicines and supporting documentation, dietary supplements, or baby products ready for inspection.

### Airport shopping

You will still be able to purchase liquids, aerosols and gels (including duty free) at New Zealand airports, once you have passed through security. There are no restrictions on buying or collecting duty free goods on arrival in New Zealand.

Some destinations have different measures on liquids, aerosols and gels.

Go to [www.flysmart.govt.nz](http://www.flysmart.govt.nz), or talk to your airport retailer, for the most up-to-date information.

### Thinking ahead

A little planning can save time for everyone and make your trip easier. Before you leave home, work out what liquids, aerosols and gels you will need during your flight. Ensure these are in containers of 100ml or smaller. Pack these items in the one litre plastic bag in your carry-on baggage. Put anything you don't need for the flight, or are unsure about, in your checked-in baggage.

### At airport security screening

- have your transparent plastic bag with your liquids, aerosols and gels ready for visual inspection.
- have any **essential** personal medications and dietary supplements ready for inspection, including any supporting documentation (such as ID cards, letters from doctors) regarding your medication.
- ensure that any baby products are accessible and ready for inspection.
- remove any electronic devices, such as laptop computers and mobile phones from your carry-on baggage so that they can be screened separately.
- remember that you will be required to remove any bulky outer garments, such as jackets or coats, so that they can be screened separately.

By following these steps, you will ensure that you, and other passengers, have a stress-free and quick transition through security screening.

*For further details on exemptions, duty free rules and the most up-to-date information about liquids, aerosols and gels in your carry-on baggage please check [www.flysmart.govt.nz](http://www.flysmart.govt.nz) or talk to your airline or travel agent.*

*Around the world, aviation authorities are working to keep travellers safe. An important new step is to ensure liquids, aerosols and gels taken on-board aircraft do not pose a security risk. You have an important role to play, every time you fly overseas.*

- The amount of liquids, aerosols and gels you (and children) can have in carry-on baggage is now limited on all flights from New Zealand to any overseas destination.
- This is in line with new international aviation security guidelines and assists with the security of everyone on-board.
- Any liquids, aerosols and gels that you want to take in your carry-on baggage **must be in containers 100ml or smaller.**
- All liquids, aerosols and gels in your carry-on baggage must be carried in ONE transparent plastic bag with a re-sealable top. The plastic bag must be no larger than one litre (about 20cm x 20cm or 15cm x 25cm).
- You will have to show your plastic bag separately from your other carry-on baggage at the airport's security screening point.
- Liquids, aerosols and gels include items such as: water, drinks, make-up, sun block, face cream and other creams, insect repellent, perfume and other sprays, lipsticks, lip gloss or balm, mascara, shaving cream or gel, shaving and other pressurised foams, shower gel, anti-perspirant, hair wax and other waxes, hair gel or spray, toothpaste and other pastes, foods in sauces, soups, stews, pickled foods, and jams.
- These liquids, aerosols and gels are still permitted in your checked-in baggage.
